**Bulle Clock Serial Number 267351**

*Photos by kind  
permission of the  
owner.*

*A short Bulle clock-  
ette movement in a  
four glass brass pil-  
lar case with ma-  
hogany top and  
base. The minute  
hand is missing and  
will be remade. The  
steelwork through-  
out has suffered  
from rust but should  
clean up OK. The  
magnet will also re-  
ceive a coat of stove  
blacking. Most of  
the work involved  
with this clock is  
mainly cleaning so  
I will leave the pho-  
tos to speak for  
themselves. The on-  
ly repairs required  
were to replace the  
silver pin at the rear  
of the fork which  
carries the loop end  
of the silver contact  
spring. And make a  
new minute hand.*

## Bulle Clock Serial Number 267351

*The oil on the fibre washers is in complete contrast the rust evident elsewhere on the steel work.*

*The broken silver contact on the back of the fork needs replacing*

## Bulle Clock Serial Number 267351

**The Bulle Clock**  
*Instructions*

1. Free pendulum by removing wedge, etc., placed to steady it.
2. Connect red wire to central terminal (red) of battery and black wire to other terminal.
3. Place battery in position to be held by the clips.
4. Adjust the pendulum swings freely. Do not rub against the black bar. The adjusting foot under and at the back of the clock case, screwed up or down to the clock to this effect. Wall clocks have adjusting screws at the back of the case, one on each side.

*The Bulle Clock should not be tilted*

**Never Transport Clock with Battery connected**

**Regulation of the BULLE CLOCK** is easy by means of the brass nut at bottom of pendulum. If slow, screw nut up; when fast, screw down. One complete turn corrects a variation of approximately two minutes per 24 hours. To ensure satisfactory working of the BULLE CLOCK no other parts must be interfered with.

*This is Bulle Clock No. 267351*

*& requires Bulle Battery No. 157*

The brass frame of the case was corroded and showed a lot of green verdigris. It should clean and polish up OK though.
